

# POWER-FL SUBWOOFERS

Power-FL8 • Power-FL10 • Power-FL12

## Power-FL Subwoofers

The culmination of over 65 years of engineering experience, the Power-FL subwoofers deliver uncompromised bass output.

## Uncompromised Bass Output | A

To maximize output and increase excursion, a proprietary butyl rubber surround is virtually double the size of conventional surrounds. The combination of an oversized surround with an ultra long-throw, mineral-filled polypropylene woofer, and a downward-firing bass radiator delivers uncompromised bass without breaking up or distorting the sound.

## Phase Control | C

This adjustment matches the phase (in-and-out movement of the speaker cones) to the main speakers to provide the best possible bass frequency response.

## Servo Control | D

Internally, the servo control system monitors the incoming signal to protect the subwoofer against damage caused by excessive amplifier power and/or distortion.

## LFE Input | E

Bypasses the built-in crossover network to allow accurate control of the subwoofer by A/V receivers equipped with their own "Subwoofer Out" connection.
